

Summary

Product Designer and Design Systems Lead with 7+ years of experience turning complex enterprise workflows into scalable, revenue-generating products. I bridge strategy and execution—defining AI-driven workflows, building systems adopted across multiple teams, and delivering measurable business impact. I lead with a systems mindset and a designer's craft.

Core Competencies

- End-to-End Product Design: Discovery, research, prototyping, visual design, QA
- Complex Workflows: Data-heavy applications, regulated environments, multi-persona systems
- Design Systems: Component architecture, token strategies, documentation, adoption
- User Research: Interviews, usability testing, A/B testing, analytics-informed design
- Led adoption of AI-driven design workflows—integrating Claude Code and MCP automation to reduce component creation time by 80% and establish reusable frameworks that accelerated product delivery.
- Strategic leadership: Defined product direction across core compliance products—influencing roadmaps, prioritization, and resource allocation. Build trust with cross-functional partners by balancing user needs, business goals, and engineering constraints.

Professional Experience

Product Designer (Design System) | Intelix Technologies | Remote | Nov 2022 – June 2026

- Enterprise EHS software used by safety professionals, admins, and frontline workers to manage compliance and operational risks. Designed for 50+ enterprise clients and thousands of daily users across safety, compliance, and frontline operations.
- End-to-end product design: Led design for core compliance products from discovery through delivery. Reduced task completion time by ~35%—accelerating time-to-compliance for safety professionals and reducing operational risk for 50+ enterprise clients.
- Turning complexity into usability: Designed for data-heavy, high-stakes environments where users can't afford friction or errors. Turned ambiguous regulatory requirements into clear, intuitive interfaces.
- Built a design system from scratch—adopted by 10+ product teams and 100+ designers/engineers—reducing component creation time by 80% and accelerating product delivery across the entire ecosystem.
- Cut support tickets by ~40% through research-driven UX improvements—saving an estimated 200+ engineering hours annually.
- Collaborative leadership: Partnered daily with Product Management and Engineering to define scope, prioritize solutions, and shape product direction. Brought a strong design point of view while building trust across teams.
- Web + Mobile: Designed for desktop web and native mobile (iOS/Android). Material Design & Apple's HIG consistency

UX Designer (Design Consultant) | Acid Integration | Toronto, ON | Aug 2018 – Nov 2022

- Early-stage startup consultancy – 0-to-1 product design for ventures with ambiguous requirements and fast-paced environments.
- Led end-to-end design for multiple MVPs – from user research and wireframes to prototypes and shipped products.
- Cross-functional partnership: Collaborated with founders and small engineering teams to define product requirements and ship quickly.

Education

Master of Architecture | University of Toronto 2016

BFA in Design | Massachusetts College of Art & Design 2011

Tools & Skills

Design: Figma, Miro, Storybook | AI: Claude Code, Cursor, Figma Make | Front-End: HTML, CSS, React, VS Code, GitHub | Accessibility: WCAG AA
